Outsourcing application development needs to an extremely cost-effective strategy for solving a variety of challenges that organizations might face in today's rapidly evolving marketplace. As a leading IT outsourcing company, 3K Corporation provides ultimate services to its clients around the globe. With the world class experience, expertise, industry knowledge, technical infrastructure and prompt delivery, 3K promises maximum returns for every client's IT investments. With the help of 'full-fledged state-of-the-art' development centers, we perform analysis, design, development and implementation of the software projects globally. Turn your dream of an effective solution design into a reality by formulating an IT-enabled strategy that revolves around your business objectives and corporate vision.

Our Services

Application Development & Support

3K Corporation's experienced developers with varying talents can deliver a high quality, but cost effective solution for all your application development needs. Our Application Development and Support team creates new applications, enhance existing applications and provides full application production support. 3K has a specific team for handling wireless applications services. This team is experienced in various wireless technologies such as mobile phones, PDAs, smart cards, RFIDs, telematics and embedded solutions.

Web & Multimedia

3K Corporation's award winning designers and developers have a wealth of experience in all the current web technologies. 3K's analysts, application design engineers and database architects will provide superior designs for any internet, intranet and multimedia applications that your company need. Our web services include new website development, existing website enhancement, web application development, web content management, web portal and multimedia design, integration of your website with new/existing databases and/or with other application, etc.

E-Commerce

Industries are trying to reduce the overhead and number of errors there by electronically exchanging business documents such as purchase orders, shipping notices, invoices, etc. and thus streamlining the back end process. Electronic Data Interchange (EDI), XML, Web forms, etc. are the tools of choice to accomplish this task and it is a very important strategy for any company today. 3K Corporation has over 10 years experience in the EDI business and enable e-commerce solutions for small, medium and large companies.

Enterprise Application Integration

Over the years, enterprises have developed and implemented many different IT systems. Today their customers demand better and faster service. To implement these desired improvements, companies must integrate those legacy systems. To re-write the existing systems would consume a tremendous amount of capital and man-hours. The most economic way to integrate the systems is to accomplish this with as little rework as possible. 3K Corporation has the experience to make this happen as seamlessly as possible by providing Program management, Vendor fixes, Functional extensions and Minor enhancements.

IT Staffing & Consultancy

3K Corporation specializes in providing IT Staffing and Consulting services to several Business Organizations in United States and abroad. Our consultants specialize in advanced technologies and can deliver short-term or extended services that range from onsite and remote troubleshooting, technical support to high-end IT consulting, project management and turn-key IT outsourcing. Moreover, our consultants often serve as project mentors training the rest of your team on their unique technical skill sets – thereby enabling you to reduce your outsourcing costs over time.

We provide a variety of technical professionals you need, from Executives, Project Managers, Business/Systems Analysts, Software Developers, System Programmers, Database Administrators or Web Designers. Our staffing services vary from temporary staffing, temp-hire and permanent staffing.

Networking

Business intelligence applications, Electronic commerce, electronic business and knowledge management applications essential to supply chain and customer relationship management rely on services and performance of a company's enterprise network. We use our diverse technology expertise and methodology to design and trouble shoots complex network infrastructures.

Our services include Network Consulting and Outsourcing, Remote Access VPN and Managed IP VPN, Exchange Server Installation & Configuration, Installation and Configuration of LAN/WAN, Router, Switch and Hub services, Database administration, etc.
